

## MV-820 Microview

5x 8x 40x Monocular, Microscope, Loupe

**Objective Lens Diameter: 20mm**

**Field of View: 348 feet at 1000 yards**

**Item Dimensions: 6.25" x 1.5" x 1.5"**

**Item Weight: 3.5 oz.**

Carson's MV-820 MicroView is a multi-purpose optical tool that is so versatile it will solve all your viewing needs. No longer do you need to buy a separate monocular, microscope or magnifying loupe. The MicroView performs all three functions in one convenient product. Without the base attachment this unit functions as an 8x monocular. So portable and compact you can slip it in your pocket and bring it with you anywhere you would like to view objects 8x larger than they would appear normally. Screw on the base attachment and the item functions as a 40x microscope! Check the thread count on sheets, magnify pictures to check the resolution or simply study an insect or any other object of interest. Everything will appear an impressive 40x larger. And the base attachment can be used on it's own as a 5x magnifying loupe. Place it on any object and peer through the top to see your viewing subject in 5x magnification. You will never run out of uses for your Carson MicroView. Comes complete with pouch, strap and lens cloth.

**View at 40x magnification using the microscope function.**

**View at 8x magnification using the monocular function.**
