

SynScan V4 Hand Controller Firmware, V3.39.03

What's new in this update?

1. "Solar Track Mode" added in the UTILITY menu.

To use this new function:

- 1) Polar align the equatorial mount or level the base of the Alt-Az mount.
- 2) Finish the initialization on SynScan. No alignment is needed.
- 3) Activate "Solar Track Mode." Now the mount will start working at solar tracking speed until exiting the "Solar Track Mode".
- 4) Center the Sun in FOV with SynScan hand controller.
- 5) Start observing.

Warning: Your telescope must be capable of observing the Sun safely, with a proper solar filter over the front of the telescope.

2. Optimized the procedure for restoring from Park position.

3. Fixed minor bugs.
